

Pack Configuration

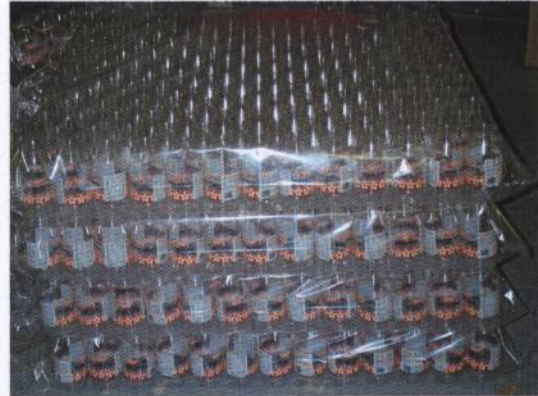

Pack dimensions are based on a standard pallet of 1200 x 1000 mm although the Automatic Bagger is also capable of producing half pack bags of approximately 600 x 1000 mm.

The machine is capable of packing Square / Rectangular or round containers made of HDPE, PET or PP.

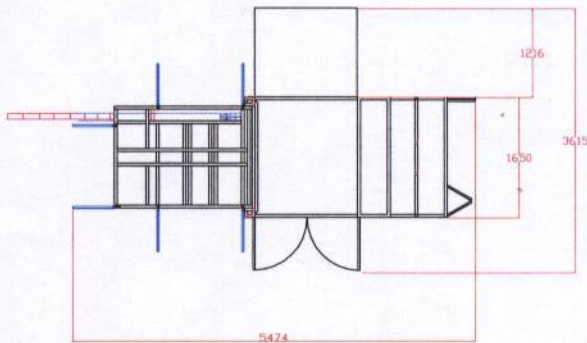

Flexibility is a key advantage of the BottleTech Bagger as the machine is fully flexible and can be set-up to run a number of different containers in a minimal amount of time without the need for change parts.
